Turning XLS into XML is no simple task, but it has been made possible by EX-Converter. With no installation involved, it lets you convert in a flash, converting various types of files, both XLS and XLSX. [Continue reading] [Show Source] The great thing about Adobe XD, one of the most popular Adobe Creative Cloud desktop apps, is the fact that it is a great design platform, but what's even better is that it has the ability to integrate with other third-party products, meaning that you can create web pages, mobile apps, or even perform social media campaigns from within the app itself. Now, if you have ever tried to create and host any content in Adobe XD and then tried to export it to HTML or CSS, you will agree that it can be a bit tedious and time consuming. After all, you have to upload your content to the cloud, and then navigate to the other tab to re-create it in a different form, and then repeat the process. Well, no longer. No more waiting. You can now do this right in Adobe XD. How? The answer is Drag and Drop, which lets you easily create a web page from scratch. To get started, open

---

up an existing project in Adobe XD, and then drop in the necessary elements. Creating a web page is pretty easy, as there are three common elements you need to create: a header, a body, and a footer.

**Creating a header** Creating a header is done by dragging the Rectangle or Curve object over the desired area. You can choose to make it a horizontal or vertical shape, and also adjust its position in the center, or at the bottom of the element. Next, make sure the black area at the bottom is selected, and then choose Edit > Transform > Reverse. Now, to add content to the header, click the Rectangle or Curve element, and then select Edit > Content Placeholder. As you can see, you can adjust various aspects of the content including its shape, opacity, as well as whether or not it has any background image. To finish up, select Add > Text. Finally, to change the text content, click on the text object, and then choose Edit > Content > Select. You can also change the text color, font, and alignment.

**Creating a footer** Similar to the header, the footer is created via a

KeyMacro is a free keylogger that captures your

---

keyboard input and saves it as plain text on the disk. It is a simple software solution to record user keystrokes and to ensure the security of your computers and laptops. It can be used to perform web searches, find out who has visited your account or who has been looking for information over your business or personal website. What is really great is that it has a built-in macro recorder so you can capture all your actions in just a few clicks of your mouse. KeyMacro Features: \* Record and export Windows Clipboard \* Exports to Text, HTML, RTF and Text.zip files \* Capture the keys pressed by your mouse \* Quickly logs a web request to a remote server \* No additional installation required \* No 3rd party adds installed \* Run all procedures on demand \* Can run on multiple monitors \* Drag and Drop can be used to copy and paste items from one window to another \* Multiple monitoring modes (Text, Copy, Paste, URL, HTML, RTF, Text.zip) \* Export to text, HTML, RTF and Text.zip \* Exporting to text, HTML, RTF and Text.zip \* Supports all Internet Explorer versions from 8 to IE 11. \* Copy/Paste with Macros \* View/Edit the recorded macro data \* Enable/Disable the recording mode \* Export recorded data to text, HTML, RTF and Text.zip file

---

\* Just one installation for all users \* No need for admin rights to run the software \* No security issues and the data you record is safe \* Use our web service to capture the web traffic \* Supports all Internet Explorer versions from 8 to IE 11. \* Record keystrokes, mouse clicks and also copy/paste to clipboard \* Password recovery and save the encrypted data on your disk \* Easy to use \* Get free support Download Now Here's a word of warning before we get started – the following page takes about 10 seconds to load, so be patient if you're in a rush. If you are fine with that, then continue reading and enjoy a short, simple introduction to the new video option in Rockwell. The new Rockwell video option in question is the Video-Overlay, which allows for video playback during tutorials, meetings, and in many other scenarios. In this new video, we'

Visual design and portability perks Set source, destination, and parameters Before the process can be put in motion, some mandatory fields need to be filled in accordingly. Active sheet, start and end rows, names, and whether or not you picked test case or suite, level folders also need to be specified. Moreover, additional fields are there so you can specify importance, summary, predictions, actions, as well as expected results. There's also a log window that shows the whole process in real time, with the possibility to have content copied to be analyzed. To sum it up Bottom line is that data is stored in various different files, which might represent requirements for some situations, and this is exactly where EX-Converter helps out. However, it feels a little rough around the edges, with little documentation provided, but the overall design is pretty simple and self-explanatory.
