Regperm Download PC/Windows (Latest)

Regperm is a console application for Windows using the Security Account Manager (SAM) to query and modify ACLs. With Regperm, you may edit an existing DACL or replace it entirely. You may allow users certain rights or deny them the same. You may also propogate the modifications to the subkeys of a particular registry key. In addition to changing permissions, you may also set a registry key value to mark it as a plain text file or a binary file. Regperm allows you to do both. You may also change the length of the path value that points to a resource. Regperm will start off in Debug mode, with the intention of providing easier modification to the ACLs of the registry. The application is limited to the first two keys below. --
--- C:\ > regedit C:\Program Files\regperm.vbs Files & Paths Regperm will work on any file or folder and does not require special installation considerations. Optionally you may have the application attempt to open up the File Explorer. If it does not then the request to open a File Explorer window is dropped and the next request is processed. Example Use Cases: Changing the permissions on a given registry key. This will both set the permissions and apply the changes to the key.
SubKey=HKEY_LOCAL_MACHINE\Software\Microsoft\Office\12.0\Outlook\InstalledAddIns SetValueType=1 SubKey=HKEY_LOCAL_MACHINE\Software\Microsoft\Office\12.0\Outlook\InstalledAddIns\{59097F52-77FD-4109-9A2A-9A7C6717D532} SetValueType=1 AllowUsers=cricket05,cricket06,cricket07 Computers: Regperm.ini:
[HKEY_LOCAL_MACHINE\Software\Microsoft\Office\12.0\Outlook\InstalledAddIns]
"{59097F52-77FD-4109-9A2A-9A7C6717D532}"=dword:00000001 The command above will set the permissions to allow user cricket05 and cricket06. Users cricket05 and cricket06 may use the installed add-in. The Path value is set to HKEY_LOCAL

Regperm

What's New in the Regperm?

The Regperm console based utility is designed to be a way of modifying the security properties of a Windows registry key. A sample usage is to modify the permissions of a registry key to allow only an Administrator to access it. The utility does not do any auditing or verification. You are responsible for the permissions of any registry keys you modify. Any changes you make are immediately propogated to the subkeys. This is a console based utility and you must run it as an Administrator. The utility has some limitation, it can only handle keys in the HKEY_LOCAL_MACHINE and HKEY_CURRENT_USER folder. It cannot handle any other folders. Supported versions: Windows 7, Windows 8, Windows Server 2012, Windows Server 2008 R2 Windows Vista Supported languages: English Warning: The utility will be overwritten if a newer version is found. Name: regperm.exe Version: 2.0.0.0 Size: 916KB Author: V.N. Mahalingam, vn2004@outlook.com

System Requirements For Regperm:

This game is all about speed. We have all the usual suspects here: Windows XP, Vista and 7, as well as newer operating systems. We also have users with Mac OS X and Linux machines, and we can easily run the game with those operating systems. We're not sure how well the game will run on Linux, but we have heard that it works well on Mac OS X (so you can't count us out of Linux support). You'll want at least 512MB of RAM, and we recommend 1GB. There is
